Allowable Subject Matter

1. Claims 4-5 allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 4-5, the applicants have presented persuasive arguments, see pages 3-4 of the response filed on 7/23/2007 that the cited reference of Hanawa fails to disclose or suggest that the etching gas is predominantly present in the first zone of the reaction region and passivating gas is predominantly present in the second zone of the reaction region, that plasma is generated in the reaction region and produces reactive etching gas species and reactive passivating gas species in the reaction region, that etching species and passivating species are generated at least largely independently of one another, and that the reactive etching gas and passivating gas species are mixed in a mixing region downstream from the reaction region before acting upon the substrate because the apparatus of Hanawa et al. also includes a bias plasma system 30 which, in contrast to the statement on page 3, lines 7 to 11 of the Office Action, does not generate a plasma but rather creates a potential difference at a substrate support member 74 to cause the plasma to move electrostatically in a direction normal to the substrate 32 (see paragraph [00281]), thus, in the apparatus of Hanawa, plasma is only generated in plasma source chamber 100. Therefore, the rejections of claims 4 and 5 under 35 U.S.C. § 102(e) as anticipated by Hanawa (U.S. Patent Application Publication No. 2002/0108713) have been withdrawn

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
